

Lab-10 (Graphics)

1. Write a c-program to initialize graphics.

Ans:

```
#include<graphics.h>
int main()
{
    int gd=DETECT,gm;
    initgraph(&gd,&gm,NULL);
    getch();                //require to hold screen
    closegraph();           //necessary
    return 0;
}
```

2. Write a c-program to draw following using graphics.

- i) line (color should be red)
- ii) circle at (100, 100) and radius 50 (Yellow color)
- iii) rectangle (Blue color)
- iv) polygon (White color)

Ans:

```
#include<graphics.h>
int main()
{
    int gd=DETECT,gm;
    initgraph(&gd,&gm,NULL);

    setcolor(RED);
    line(50,200,200,200);

    setcolor(YELLOW);
    circle(100,100,50);

    setcolor(BLUE);
    rectangle(50,300,300,400);

    setcolor(WHITE);
    int points[] = {400, 200, 500, 150, 600, 200, 550, 300, 450, 300, 400, 200};
    drawpoly(6, points);
    getch();
    closegraph();
    return 0;
}
```

Output:

3. Write a c-program to print following using graphics.

- i) Good Morning at (350, 150)
- ii) HELLO with red color and Green background color.

Ans:

```
#include<graphics.h>
int main()
{
    int gd=DETECT,gm;
    initgraph(&gd,&gm,NULL);
    outtextxy(350,150,"Good Morning");
    setcolor(RED);
    setbkcolor(GREEN);
    outtextxy(350,200,"HELLO");
    getch();
    closegraph();
    return 0;
}
```

Output:

Windows BGI

Good Morning

HELLO
